

AMENDMENTS TO THE ABSTRACT

An abstract is provided herewith on a separate page.

ABSTRACT

6. The invention relates to a hearing-aid, worn behind the ear, having a housing which has a housing shell, an electronic circuit and an energy accumulator. The hearing aid is constructed from the housing shell and a multi-functional plate, which is known as a face plate and which is adapted in form to the housing shell. The circuit and an access opening for the energy accumulator are provided on the face plate.
